PREVENTS NUISANCE MIDGE AND FILTER FLY EMERGENCE
CONTROLS WASTE WATER NUISANCE PESTS

ACTIVE INGREDIENT:
(S)-Methoprene (CAS #65733-16-6) ............... 4.25%
OTHER INGREDIENTS: .................................. 95.75%
TOTAL: ..................................................... 100.00%
EPA REG. NO. 2724–448

KEEP OUT OF REACH OF CHILDREN
CAUTION

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Causes moderate eye irritation. Harmful if absorbed through skin. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling.

FIRST AID
Call a poison control center or doctor for treatment advice.
If in eyes • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
If on skin or clothing • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-248-7763 for emergency medical treatment information.

ENVIRONMENTAL HAZARDS
Do not contaminate water when disposing of rinsate or equipment washwaters.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

INTRODUCTION
STRIKE® Pellets are a unique product that controls filter flies (Psychoda spp.), midges (Chironomidae), and other nuisance aquatic insect species infesting waste water facilities. STRIKE® Pellets contain an Insect Growth Regulator (IGR) that is effective on the developing stages of insect pests. STRIKE® Pellets do not kill adults but affects the larval stages as they grow and develop. STRIKE® Pellets stop the formation of pupae of insect pests, thereby eliminating adult populations. STRIKE® Pellets stop the cycle of reproduction, keeping pest infestations under control. Continued use of the product prevents these pests from rebounding into unmanageable infestations.

GENERAL DIRECTIONS
STRIKE® Pellets release effective levels of an Insect Growth Regulator for up to 30 days under typical environmental conditions. Continue treatment through the last brood of the season. Treated larvae continue to develop normally to the pupal stage where they die.

NOTE: This insect growth regulator has no effect on midges or filter flies which have reached the pupal or adult stage prior to treatment.
APPLICATION SITES AND RATES

Use lower application rates when water is shallow, vegetation and/or pollution are minimal, and insect populations are low. Use higher rates when water is deep (>2 ft), vegetation, pollution, and/or organic debris or water flow are high, and insect populations are high. In instances of high organic debris and water flow, residual activity may be diminished.

APPLICATION METHODS

Midges: Apply STRIKE® Pellets up to 15 days prior to flooding, or at any stage of larval development after flooding or in permanent water sites. Fixed wing aircraft or helicopters equipped with granular spreaders capable of applying rates from 5 to 10 lb/acre may be used to apply STRIKE® Pellets. The pellets may also be applied using ground equipment which will achieve good, even coverage at the above rates. Apply STRIKE® Pellets to artificial containers, such as tires and catch basins, etc.

Waste Water Nuisance Pests: For applications to solid waste, including sludge and retention ponds, use the initial high rate of 10 lb/acre. Immediately following filling of the drying beds, apply the product uniformly to the surface of the bed. Application of STRIKE® Pellets to solids will prevent the emergence of adult insect pests thereby keeping infestations under control.

For applications in aquatic habitats, including waste water treatment facilities, evisceration ponds, sewage lagoons, manure runoff areas, retention ponds, and holding tanks, apply STRIKE® Pellets as uniformly as possible over the entire surface. In situations where the ponds are large, applications made around the perimeter of the ponds can be helpful in reducing pests. In these situations, apply up to a 20 foot band out from the bank around the pond perimeter.

Apply STRIKE® Pellets using suitable application equipment, such as, hand or motorized spreaders, backpack blowers, or aircraft (rotary or fixed wing). Even coverage over the surface of the area to be treated is critical for optimum performance.

What to Expect in Waste Water Facilities: Following initial applications of STRIKE® Pellets, a gradual reduction in the number of adult pests will be seen over approximately a one week period. Reduction in adult populations will be noticeable within a two week period following the application. Due to varying conditions or heavy infestations, the period to expect control may be longer. Since the mode of action of STRIKE® Pellets is to prevent adult emergence, existing adults and pupae present at the time of initial application will complete their life cycle.

STORAGE AND DISPOSAL: Do not contaminate water, food, or feed by storage or disposal. Store closed containers of STRIKE® Pellets in a cool, dry place. Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Handling: Nonrefillable container. Do not reuse or refill this container. Triple rinse (or equivalent). Then offer for recycling, if available, or puncture and dispose of in a sanitary landfill, or by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

WARRANTY AND CONDITIONS OF SALE

Seller makes no warranty, expressed or implied, concerning the use and handling of this product other than indicated on the label. Buyer assumes all risks of use and handling of this material when such use and handling are contrary to label instructions.
